Subject: Re: Offshore Oil and Gas Reissued Permit - BETA Offshore

Thanks Sandra, please buy me plenty of time to go through them. It may take a while (10 platforms, 50 pages each = 500 pages) and I have a lot of other projects I'm working on too. But, I will get to them.....Promise ! Take care

Hi Steve,

I've been very busy coding the permits and seeing what I missed. I should be done sometime next week. I will send a new set of DMRs out for your review once I'm done. Thanks.

No problem Sandra. You might consider allowing the operators to continue using the current forms they use that are already modified specifically for each platform until the NetDMR takes over. As the new permit takes effect this month, operators are beginning slight mods to the existing forms as they go. Feel free to obtain a copy of those 3320-1 forms we submit from here on for reference. Eugene has agreed in the past as long as our 3320-1 forms are completed with the proper information, they are acceptable. Since there are many changes to make to all the forms on your end for each platform, it might be best to modify your new forms to be used in the NetDMR reporting that will be mandated next year some time. Seems silly to change the

entire process now and fill in a much larger non-writable PDF form, when everything is going to go with the electronic reporting next year. We can discuss more when you call.....food for thought..... Have a great day Sandra.

Hi Steve,

Thanks for looking over the DMRs so quickly. Please let me know if there are any other issues. I will need time to review the permit again. Perhaps we can have a call sometime next week.

Hi Sandra, I ran through these quickly and these are not correct. Did you update these in regards to the new permit? In a quick read I saw the following errors and upon closer review there may be more:

- They all say Pg. 1 at the bottom.
- Produced water has no toxicity listed. It is required quarterly for the first year now, annually thereafter.
- You list fire water chlorine as monthly. There are no chlorine requirements for fire water anymore. (all three Es)
- N.C.Cooling water Cl2 is listed as monthly and it is now quarterly. (all three Es)
- Eureka lists Cl2 for the MSD as monthly. It is not required (USCG approved device).

It looks like these will need to be reviewed closely by each operator and corrected before they can be sent out and required to be completed. We worked good together in the past and I look forward to helping you again if you like. Until these can all be updated and fully reviewed, it appears best for industry to continue reporting the way they currently are and we can transform to any new forms as

time permits. It should also be noted that the current DMRs submitted include about 12-18 pages depending on the platform and types of discharges. Your forms here are close to 50 pgs for each. Is there a way EPA can consolidate them more?

Marina,

Here are the pdf. Sorry you were not able to open the earlier one sent.

For some reason I cannot open the pdf file. I get a message that says the file was damaged. Can you try to resend it please?

Thanks,
Marina Robertson

Please note that your permit was recently reissued as of 3/1/2014. Attached are the updated DMRs. Please note that these are the official DMR forms that need to be filled out and returned to EPA. Forms will be sent periodically with sufficient time before they are due. The instructions are attached.

In the past, we have encourage all dischargers to use NetDMR, EPA's e-reporting software which is still available to you. With the NPDES Proposed E-reporting Rule that will require e-reporting of DMR data, we want you to be aware that this regulation will come into effect as early as next year.
